Sequence 13, Application US/09521335

Sequence 13, Application US/09521335

Patent No. 6800460

GENERAL INFORMATION:

APPLICANT: Oppmann, Birgit

APPLICANT: Kastelein, Robert A.

APPLICANT: Bazan, J. Fernando

TITLE OF INVENTION: Mammalian Cytokines; Related Reagents and Methods

FILE REFERENCE: DX0935K

CURRENT APPLICATION NUMBER: US/09/521,335

CURRENT FILING DATE: 2000-03-09

NUMBER OF SEQ ID NOS: 13

SOFTWARE: PatentIn Ver. 2.0

SSOFTWARE: PatentIn Ver. 2.0

The present sequence represents a murine haemopoietin receptor NR6 (CLF-polypeptide. The specification describes a method for the treatment or prophylaxis of disease conditions associated with dysfunctional haemopoietic regulation. The method comprises modulating the production of hemopoietic progenitor cells in a mammal by administration of NR6. Decreasing production of progenitor cells may be used in the treatment of cancer or to induce apoptosis of particular cell types. Increasing production of progenitor cells is used to facilitate postnatal survival in mammals by inducing or promoting suckling. Potential disease conditions may be identified by monitoring NR6 production in postnatal babies or allowing expectant mothers to undergo foetal testing. Low NR6 levels can then be treated immediately
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      PSSGPVRRELKQFLGWLKKHAYCSNLSFRLYDQWRAWMQKSHKTRNQDEGILPSGRRGAA 420

                                                                                                                                                                                                                                                                                                         The present invention relates to a biologically active complex comprising a haemopoletin receptor, NR6 and cardiotrophin-like cytokine (CLC). The complex is useful in the manufacture of a medicament for the treatment and/or prophylaxis of a subject, as it is involved in facilitating proliferation, differentiation and/or survival of a cell. The components have neurotrophic activity. The present sequence is murine haemopoletin receptor, NR6.2 isoform. The NR6.2 represents the NR6 splice variant obtained due to alternative mRNA splicing

This is the amino acid sequence of the murine U4 protein from the haematopoietin receptor superfamily, used in the method of the invention for the modulation of cell proliferation, or the immune response.

Transformed mammalian cells are used to produce recombinant U4 protein. The U4 protein is used to screen for specific binding agents, raise antibodies. It is also used as reagents for assays and as tissue markers for isolation of cognate ligands and receptors, and in pharmaceutical compositions which may modulate cell proliferation, cell differentiation, and the immune system (e.g. for treating immune deficiency, inherited or the result of infection, autoimmune diseases, cancer, and allergy)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        61 ATCSIHGDTPGATAEGLYWTLNGRRLPSELSRLLNTSTLALALANINGSRQQSGDNLVCH 120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                New nucleic acid encoding U4 haematopoietin receptor superfamily chain - potentially useful, e.g. for modulating cell proliferation or immune response, for treating cancer and auto:immune disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       1 MPAGRPGPVAQSARRPPRPLSSLWSPLLLCVLGVPRGGSGAHTAVISPQDPTFLIGSSLQ

The protein sequence has conserved tysteaine pairs and WSXWS motifs characteristic of the receptor family. It is predicted to have the following biological activities: cytokine, cell proliferation/differentiation, immune stimulating or suppressing and haematopoiesis regulating. The U4 protein can be used to treat immune disorders and deficiencies, autoimmune disorders, allergies, cancer, myeloid or lymphoid cell deficiencies and platelet disorders

                                                                                                                                                                                                                                                                                ö
                                                                                The present sequence represents a protein designated Zcytors, which is a cytokinin-like receptor. Soluble Zcytors may be administered to downregulate the effects of a growth and/or maintenance factor in thyroid, heart, and skeletal muscle for example to lessen the effect of cardiotrophin-1 on cardiac pathologies, so preventing heart enlargement. Zcytors could be used to detect cardiotrophin-1 in the blood, and to discover other possible Zcytors ligands. A probe comprising Zcytors DNA or RNA can be used to determine the presence and integrity of the Zcytors gene on chromosome 19. Antibodies and the anti-idiotypic antibody could be used to purify Zcytors and therapeutically to modify Zcytors ligand
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          420

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         180
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             300
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      300
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   360
                                                                                                                                                                                                                                                                                                                                                                The haemopoietin receptor (HR) NR6.1 is a form of the novel HR NR6. Interaction between the novel HR and a ligand facilitates proliferation, differentiation and survival of a wide variety of cells. The HR and it's derivatives can be used for modulating the activity of the receptors e.g. to regulate development, maintenance or regeneration in an array of different cells and tissues in vitro and in vivo. They can be present in therapeutics used for modulating neuronal proliferation, differentiation and survival. The products can also be used for detection and diagnosis, e.g. for cancers or predisposition to cancers, or for drug screening
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ATCSIHGDTPGATAEGLYWTLNGRRLPSELSRILINTSTLALALANLNGSRQQSGDNLVCH

The present invention relates to a biologically active complex comprising a haemopoietin receptor, NR6 and cardiotrophin-like cytchine (CLC). The complex is useful in the manufacture of a medicament for the treatment and/or prophylaxis of a subject, as it is involved in facilitating proliferation, differentiation and/or survival of a cell. The complex or its components have neurotrophic activity. The present sequence is murine haemopoietin receptor, NR6.1 isoform. The NR6.1 represents the NR6 splice variant obtained due to alternative mRNA splicing
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      jically active complex comprising NR6 and cardiotrophin-like-for facilitating proliferation, differentiation and/or survival
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Murine; biologically active complex; haemopoietin receptor; NR6; cardiotrophin-like cytokine; CLC; therapy; prophylaxis; proliferation; differentiation; cell survival; neurotrophic activity.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      record issued on 09-SEP-2004 : Correction to Feature Table Key

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The present sequence represents a murine haemopoietin receptor NR6 (CLF-
1) polypeptide. The specification describes a method for the treatment or
prophylaxis of disease conditions associated with dysfunctional
haemopoietic regulation. The method comprises modulating the production
of hemopoietic progenitor cells in a mammal by administration of NR6.
Decreasing production of progenitor cells may be used in the treatment of
cancer or to induce apoptosis of particular cell types. Increasing
production of progenitor cells is used to facilitate postnatal survival
in mammals by inducing or promoting suckling. Potential disease
conditions may be identified by monitoring NR6 production in postnatal
babies or allowing expectant methers to undergo foctal testing. Low NR6
levels can then be treated immediately
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Administering the hemopoietin receptor NR6 is used to modulate production of hemopoietic progenitor cells and facilitate postnatal survival of mammals by inducing or promoting suckling.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                240

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The present invention describes a composition (I) comprising DNAX cytokine receptor subunit I (DCRSI) protein and DNAX soluble receptor subunit I (DSRSI) protein, which together encode a new mammalian cytokine related receptor (R), or DCRSI and interleukin B30 (IL-B30) proteins, or DSRSI and interleukin B30 (IL-B30) proteins, or DSRSI and interleukin B30 (IL-B30) proteins, or DSRSI and DCRSI is useful for screening for ligands (i.e. agonists/antagonists) from a library of compounds, which are useful for modulating the physiology or development of a cell or tissue culture e.g. inflammatory responses, innate immunity and/or morphogenic development. (R), antibodies and ligands are useful for treatment of conditions, especially immunological disorders,

            useful as a phosphate labeling enzyme to label substrates, and the subunits DSRS1 and DCRS1 are useful as immunogens for generating antibodies, or as antigens for binding antibodies. Nucleic acids encoding (R) are useful for identifying related DNAs and mRNAs, and variants from other individuals or species. The present sequence represents the specifically claimed mouse DSRS1, for use in the composition of the present invention

The present invention describes a composition (I) comprising a recombinant DNAX cytokine receptor subunit-2 (DCRS2) polypeptide. The PCRS2 polypeptide is useful for binding ligands and for preparing antibodies. The DCRS2 polypeptide is also useful for modulating cell proliferation, for diagnostic and therapeutic applications, for detecting presence of their ligands and in drug screening assays. It is also useful for treating conditions such as immunological disorders. The present sequence represents a cytokine receptor subunit protein which is given in an alignment of various cytokine receptor subunits in the exemplification
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 PEKPFNISCWSRNMKOLICRWIPGAHGEIFLHTNYSLKYKLRWYGQDNTCEEYHTVGPHS 197
                                                                                                                                                                                                                                                      Novel composition comprising DNAX cytokine receptor subunit polypeptide useful for regulating immune system function and for treating immunological disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           1 RPLSSIMSPLLLCVLGVPRGGSGAHTAVISPQDPTLLIGSSLQATCSIHGDTPGATAEGL

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         8
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       à
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ij
                                                                                                                                        The present sequence is that of mouse cytokine-like factor-1 (CLF-1), a cytokine receptor family protein, which forms a complex with human interleukin-B60 (IL-80) (see AAB19586). The IL-B60/CLF-1 cytokine serves as a key physiological factor in motor neuron development and regeneration. A claimed soluble complex comprises at least 6 amino acids of mature IL-60B, at least 6 amino acids of mature IL-60B, at least 6 amino acids of mature chr-1 or at least 6 amino acids of contacting the cell of a cell or tissue culture cell involves contacting the cell with an agonist or antagonist of a complex comprising IL-60B and CLF-1 or CMFF-R. A claimed method of screening for a receptor which binds the complex involves contacting the complex involves contacting the complex involves contacting the complex with a cell expressing the receptor, to form a detectable interation resulting in a physiological response in the cell

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Novel mammalian cytokines, useful for producing antigen-antibody complex, treating conditions associated with abnormal physiology or development, including inflammatory conditions and/or autoimmune disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The invention relates to a complex comprising interleukin (IL)-B60, expedientalike factor i (CLF-1) (partner sequence of IL-B60) and CNTF-R (CNTF-receptor). The complex is useful for producing an antigen:antibody complex, useful for treating conditions associated with abnormal physiclogy or development, including inflammatory conditions and/or autoimmune disorders and for generating antibodies which is useful in diagnostic applications. The present sequence is mouse cytokine-like

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    셤
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The invention describes a composition of matter (I) comprising a substantially pure or recombinant DNAX cytckine receptor subunit 2 (DCRS2) polypeptide, a natural DCRS2 polypeptide, or a fusion protein comprising a DCRS2 sequence. A composition of matter comprises: a comprising a DCRS2 sequence. A composition of matter comprises: a substantially pure or recombinant DCRS2 polypeptide comprising at least three distinct nonoverlapping segments of at least four amino acids identical to segments of a fully defined 384 amino acids sequence (SI), given in the specification; a substantially pure or recombinant DCRS2 polypeptide comprising at least two distinct nonoverlapping segments of at least five amino acids identical to segments of SI; a natural sequence. The purple of a magnist or a magnisting to a mammalian DCRS2 is useful for modulating physiology or development of a call or call culture. Antibodies to a DCRS2 can be used for quantitative detection of interferon. The DCRS2 polypeptides and nucleic acids and their binding agents are potentially useful in treating and disease, especially disease associated with the immune system. This is the amino acid sequence of mouse cytokine
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ä
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            119

The methods and compositions of the present invention are useful in controlling biology and physiology of mammalian cells, such as cells of mammalian immune system, and in particular for regulating activation, development, differentiation and function of various cell types, including haematopoietic cells. They are specifically useful in treating abnormal medical conditions, including immune disorders, such as I cell immune deficiency, chronic inflammation or tissue rejection, or in cardiovascular or neurophysiological conditions. The present sequence is the mouse cytokine-like factor 1 (CIR-1).

C.Comment: This is one of the short forms (Sla and Slb) of the human prolactin receptor cta-casein gene promoter activation, with Sla less effective than Slb. However, their lited COS-1 and HEK293 cells is due to rapid intracellular turnover of the receptor. #expe
